

A READER'S GUIDE

The Free Library Method

How to Unlock 80,000+ Free Books in 60
Seconds — On Your Phone, Kindle, or Any
Device

[Cover image placeholder — this background will be replaced with the Higgsfield-generated cover photo. Prompt is in `estructura-ebook.md`, image 1. Everything else on this page renders correctly as-is.]

Introduction

Welcome — you now have everything you need to read almost any classic book, completely free, for as long as you want.

In the next few minutes, you're going to:

- Install one simple app (if you don't already have it)
- Activate your personal access with the code you received
- Search for and download your first book

No subscriptions. No monthly fees. No limit on how many books you download. Once you're set up, getting a new book takes about 15 seconds — less time than it takes to find your credit card.

What this actually is

Behind the scenes, this gives you access to a private tool that searches three of the largest legal libraries of free books in the world — **Standard Ebooks**, **Project Gutenberg**, and **Internet Archive** — all at once, and hands you the file instantly, already picked from the best-quality source available. No hunting through five different websites, no sketchy pop-ups, no fake "download" buttons that install something you didn't ask for.

What this is not

To be completely clear: every single book you'll download through this is **legally free and public domain** — meaning the copyright has expired and nobody owns it anymore. This is not piracy, and it's not a gray area. You're not "getting away with" anything. These are libraries doing exactly what libraries are for.

Let's get you set up.

Installing Telegram

[Section image placeholder — Higgsfield prompt #2 in estructura-ebook.md]

Your access runs inside an app called **Telegram** — a free, extremely popular messaging app (similar to WhatsApp), available on every phone, tablet, and computer. If you already use Telegram, skip ahead to Part Two.

On iPhone / iPad

1. Open the **App Store**.
2. Tap the search icon and type **Telegram**.
3. Tap **Get**, then confirm with Face ID, Touch ID, or your Apple ID password.
4. Once it's installed, tap **Open**.

On Android

1. Open the **Play Store**.
2. Search for **Telegram**.
3. Tap **Install**.
4. Once it's installed, tap **Open**.

On a computer (Windows / Mac)

1. Go to **telegram.org** in your browser.
2. Click **Get Telegram**, and download the version for your operating system.
3. Install it like you would any other program, then open it.

(You can also just use Telegram directly in your browser at web.telegram.org — no installation needed — though the app is more reliable for receiving files.)

Creating your account (first-time Telegram users only)

When you open Telegram for the first time, it will ask for your phone number to create your account. This is completely normal — it's how Telegram verifies you're a real person, the same as any messaging app. It will text you a short verification code; type that code in, and you're in. This takes under a minute.

Activating Your Access

1. Inside Telegram, tap the search icon (usually a magnifying glass at the top).
2. Type in the bot name (found in your purchase confirmation) and tap it to open the chat.
3. Tap **Start** (or send `/start` if there's no button).

What you'll see after tapping Start

Now send this exact message, replacing the placeholder with your real code:

`/unlock YOUR-CODE-HERE`

You should immediately get a confirmation:

You're fully activated once you see this

If your code doesn't work

- **Double-check for typos.** Codes don't care about uppercase or lowercase, but every letter and number needs to be exact — copy-paste it directly from your confirmation instead of retyping it.
- **Make sure there's a space** between `/unlock` and your code.
- **"Already used on another account"** — message us on Instagram (see the Support section) and we'll sort it out immediately.

How to Use the Bot

[Section image placeholder — Higgsfield prompt #3 in estructura-ebook.md]

This is the easy part. There's no command to remember — you just type.

Searching for a book

Simply type the title (or the author's name) directly into the chat, like you're texting a friend:

Send it, and within a couple seconds you'll see a numbered list

💡 **Tip:** If a book doesn't show up under its exact title, try searching just the author's last name instead — e.g., "Dickens" instead of "A Tale of Two Cities."

Picking your book

Under the list, tap the number next to the book you want. If there are more results than fit on one screen, tap the navigation arrows (⏮️ ⏪️ ⏩️ ⏭️) to move between pages without losing your place.

Choosing a format

Once you pick a book, you'll see the formats available

- **EPUB** — works on almost everything except Kindle (phones, tablets, Kobo, most reading apps)
- **Kindle** — built specifically for Amazon Kindle devices and apps
- **PDF** — a fixed-layout version, works everywhere but doesn't resize text as nicely on small screens

Tap the format that matches your device (see Part Four for exactly what to do with it), and the file lands directly in your chat within a few seconds:

Your book, delivered straight to the chat

Quick access to popular classics

If you don't have a specific title in mind, send `/popular` — this instantly shows you 10 of the most-requested classics of all time, no searching required.

Starting fresh

If your chat ever gets cluttered, send `/reset` and the bot will clean up the conversation and show you the welcome message again. Nothing about your access is affected.

Getting Your Book Onto Your Device

[Section image placeholder — Higgsfield prompt #4 in estructura-ebook.md]

This is the part most guides skip — and it's exactly where most people get stuck. Here's exactly what to do, device by device.

iPhone / iPad

1. After tapping the download button, the file appears as a document inside your Telegram chat.
2. Tap the file, then tap the **share icon** (the square with an arrow pointing up).
3. Choose **Save to Files**, or if you have a reading app installed, choose **Copy to [App Name]** directly.
4. If you saved it to Files, open the **Books** app (built into every iPhone) — it will usually pick it up automatically, or tap + inside Books and select the file.

Android

1. Tap the file inside your Telegram chat, then tap the **download icon** to save it to your phone.

2. Open whichever reading app you prefer (Google Play Books, Moon+ Reader, or similar — most are free).
3. In the app, look for an **Import**, **Add file**, or + button, and select the file from your **Downloads** folder.

Kindle — the most common sticking point

Kindle devices don't read EPUB files directly, so make sure you tap the **Kindle format button** (not EPUB) when you download. Once you have that file, you have three options:

Option A — Send to Kindle app (easiest, if available in your country):

1. Save the file from Telegram to your phone (see iPhone/Android steps above).
2. Open the free **Send to Kindle** app, sign in with your Amazon account, and select the file to send it straight to your Kindle library.

Option B — Email it to your Kindle:

1. Every Kindle has its own email address, like `yourname_123@kindle.com`. Find yours at **amazon.com** → **Manage Your Content and Devices** → **Preferences** → **Personal Document Settings**.
2. Save the file to your phone, then email it as an attachment to that address.
3. It'll appear on your Kindle next time it connects to Wi-Fi (usually within a couple minutes).

Option C — USB cable (works 100% of the time, no internet needed):

1. Save the file to your computer.
2. Plug your Kindle into your computer with a USB cable.
3. Your Kindle will appear as a drive — drag the file into the **documents** folder.
4. Unplug, and it'll show up on your Kindle's home screen.

Kobo and other e-readers

Kobo reads EPUB natively:

1. Save the EPUB file to your computer.
2. Connect your Kobo via USB — it appears as a drive.
3. Drag the file into the main folder, then safely eject.

For any other e-reader brand, the USB method above almost always works the same way, since EPUB is the universal standard format.

Bonus Content

50 classics to get you started

Here are 50 must-read classics, ready to search the moment you want them. Just type the title exactly as shown:

- Pride and Prejudice
- Frankenstein
- Dracula
- Alice's Adventures in Wonderland
- A Tale of Two Cities
- Moby Dick
- The Adventures of Sherlock Holmes
- War and Peace
- The Picture of Dorian Gray
- Romeo and Juliet
- Jane Eyre
- Wuthering Heights
- Great Expectations
- The Great Gatsby
- Anna Karenina
- Crime and Punishment
- The Count of Monte Cristo
- Little Women
- The Adventures of Huckleberry Finn
- Treasure Island
- The Strange Case of Dr Jekyll and Mr Hyde
- The War of the Worlds
- Middlemarch
- Vanity Fair
- The Odyssey
- The Iliad
- Don Quixote
- Les Misérables
- The Scarlet Letter
- Emma
- Sense and Sensibility
- Oliver Twist
- David Copperfield
- The Brothers Karamazov
- Madame Bovary
- The Adventures of Tom Sawyer
- Robinson Crusoe
- Gulliver's Travels
- The Time Machine
- The Invisible Man
- Heart of Darkness
- North and South
- The Wind in the Willows

- Peter Pan
- The Secret Garden
- A Christmas Carol
- The Importance of Being Earnest
- Hamlet
- Macbeth
- Persuasion

If a book doesn't show up

- Try just the author's last name.
- Try dropping subtitles (e.g., search "Frankenstein" instead of "Frankenstein; or, The Modern Prometheus").
- Very recent books (still under copyright) won't appear — this tool covers public-domain classics, not current bestsellers.

Getting help

Something not working the way this guide describes? Don't struggle with it — message us directly on Instagram and we'll help you sort it out personally, usually within the day.

Instagram: @your_ig_handle_here

You're All Set

[Closing image placeholder — Higgsfield prompt #5 in estructura-ebook.md]

That's genuinely everything there is to it. Install, activate, search, download, read. Enjoy the library — it's yours now, for good.
